Chapter 3 Interface

3.1 Interface

-Specifications

Data transmission method : Asynchronous Serial
Handshaking : DTR/DSR control
Default protocol : 9600 bps, non-parity, 8 data bits, 1 stop bit.

-Interface connector (display panel side)

-RJ45 type 8 pin modular jack

-Pin assignment:

-Connector signal assignment

Pin number	Name	I/O	Description
1	NC		Not connect
2	TXD	OUTPUT	Transmit data
3	RXD	INPUT	Receive data
4	DSR	INPUT	Data set ready (from the printer)
5	GROUND		
6	DTR	OUTPUT	Data terminal ready (fromthe display)
7	Vp		Power supply (+5V)

8	Vgnd		Power supply (GND)
---	------	--	--------------------

-Communication Protocol

1. Receive data.

The DTR signal is as follows:

[HIGH] This indicates that the display isn't ready to receive data.

It depend on the following conditions:

- ☐ The period from when the power is turned on to when the printer first becomes ready to receive data.
- ☐ When the remaining space in the receive buffer becomes 128 bytes or less.
- ☐ When the DTR signal of the printer is HIGH when the printer is selected using the command.

[LOW] This indicates that the display is ready to receive data.

It depend on the following conditions:

- ☐ When the printer first becomes ready to receive data after power-on.
- ☐ When the remaining space in the receive buffer becomes 128 bytes or more.
- ☐ When the DTR signal of the printer is LOW when the printer is selected using the command.

2. Transmit data.

After confirming the DSR is LOW, data is transmitted to printer.

3.2 Interface conversion adapter

The interface adapter section has connectors for the display panel, the printer, the power supply, and host computer. All the data transmitted from the host computer will be received by the display. If this data is for the display, the data will be processed, and if it is for the printer, it will be transmitted to the printer. Whether the data is for the display or the printer can be switched using the peripheral device selection command.

D-sub 25 pin connector signal assignment

Pin number	Name	I/O	Description
1	GROUND		Frame ground
2	TXD	OUTPUT	Transmit data
3	RXD	INPUT	Receive data
6	DSR	INPUT	Data set ready
7	GROUND		Ground
20	DTR	OUTPUT	Data terminal ready

D-sub 9 pin connector signal assignment

Pin number	Name	I/O	Description
1	NC		Not connect
2	RXD	INPUT	Receive data
3	TXD	OUTPUT	Transmit data
4	DTR	OUTPUT	Data terminal ready
5	GROUND		Ground
6	DSR	INPUT	Data set ready
7	POWER		+5 V power source

D-sub 9 pin & 25 pine Power Source signal assignment

Jumper number	Description
1-2	The +5V power source is assign to No. 9 of 9 pin D-sub
3-4	The +5V power source is assign to No. 7 of 9 pin D-sub
5-6	The +5V power source is assign to No. 22 of 25 pin D-sub
7-8	The +5V power source is assign to No. 4 of 25 pin D-sub

The factory setting for this jumper is NULL, that means the customer display must have the +5V DC adapter. If there has any reason that user doesn't want to use the adapter, the engineer should set this jumper and provide the +5V power source to the correct pin number.
